

ABSTRACT

A valve which has a valve body having a through-bore to permit the flow of gas through the through-bore, an excessive flow valve disposed within the through-bore of the valve body, the excessive flow valve including a supporting tube having a plurality of struts, an axial bore extending through the supporting tube, a stem movable axially against a spring within the bore and a disk on a free end of the stem. The excessive flow valve is engaged in a through-bore of the valve body.
